2

## WE CLAIM:

1	1.	A method for conducting a financial transaction, comprising:
2	making an application for acquisition of a financial product that requires activation to	
3	become effective;	
4	processing said application for approval; and	
5	following approval of said application, activating said financial product to complete said	
6	financial transaction, wherein said steps of making, processing and activating are all conducted	
7	through a global communications network.	
•		
1	2.	The method according to Claim 1, and further including the step of paying for said
2	financial product prior to said activating step.	
1	3.	The method according to Claim 1, wherein said financial product comprises an
2	insurance policy, and wherein said financial transaction comprises selling and buying said	
3	insurance policy.	
1	4.	The method according to Claim 3, wherein said activating step comprises
2	providing coverage under said insurance policy.	
1	5.	The method according to Claim 4, wherein said insurance policy comprises a life
2	insurance policy.	
1	6.	The method according to Claim 1, wherein said global communications network

The method according to Claim 6, wherein said steps of making, processing and 7. 1 2 activating are all conducted during a single Internet session.

comprises a world wide web.

- 8. The method according to Claim 1, wherein said processing step is performed by a financial transaction service provider, and wherein said activating step is performed by a provider of said financial product.
- 9. 1 The method according to Claim 1, wherein said processing and activating steps 2 are performed by the same entity.
  - 10. A method for buying and selling an insurance policy, comprising: making an application to purchase said insurance policy; processing said application for approval; and

following approval of said application, providing coverage under said insurance policy, wherein said steps of making, processing and providing coverage are all conducted through a global communications network.

- 11. The method according to Claim 10, and further including the step of paying for said insurance policy prior to said providing coverage step.
- 12. The method according to Claim 10, wherein said insurance policy comprises a life insurance policy.
- 13. The method according to Claim 10, wherein said global communications network 2 comprises a world wide web.
  - 14. The method according to Claim 13, wherein said steps of making, processing and providing coverage are all conducted during a single Internet session.
  - 15. The method according to Claim 10, wherein said processing step is performed by a financial transaction service provider, and wherein said providing coverage step is performed by a provider of said insurance policy.

- 16. A system for conducting a financial transaction through a global communications network, comprising:
- a first interface for receiving an application from an applicant through the global communications network for acquisition of a financial product that requires activation to become effective;

a processor for processing said application for approval; and

if said application is approved, a second interface for routing application information to a provider of said financial product through the global communications network to obtain substantially immediate activation of said financial product by said provider.

- 17. The system according to Claim 16, wherein said financial product comprises an insurance policy, and wherein said financial transaction comprises selling and buying said insurance policy.
- 18. The system according to Claim 17, wherein said insurance policy comprises a life insurance policy, and wherein said activation comprises providing coverage under said policy.
- 19. The system according to Claim 16, wherein said system is operated by a financial transaction service provider that comprises a different entity than said provider of said financial product.
- 20. The system according to Claim 16, wherein said global communications network comprises a world wide web, and wherein said first and second interfaces comprise Internet connections through said world wide web.
